Order ID: SAMPLE-PREMIUM-001

Birth date/time submitted: 2026-05-14 09:00

Birth date/time used for calculation: 2026-05-14 08:10

Gender marker: male

Birthplace: Los Angeles, CA, United States

Report tier: PREMIUM

Before You Read This

Korean Saju, also called Four Pillars, is a traditional East Asian timing system. It turns a corrected birth moment into four columns: year, month, day, and hour. Each column has a Heavenly Stem and an Earthly Branch. These are not planets or Western zodiac signs. They are symbolic markers for season, climate, structure, timing, and repeated behavior.

This report uses plain English because most English-speaking clients have never studied Saju. A term is introduced first, then translated into practical meaning. Treat the report as a decision-support framework, not as fixed fate or medical, legal, financial, or psychological advice.

The most important technical point is that the report does not blindly read the clock time exactly as typed. A birth in Los Angeles, Seoul, London, or Sydney has a different timezone, daylight-saving rule, and longitude. Those details can change the hour pillar and sometimes the day pillar, so the calculation basis is shown clearly below.

Calculation Basis: Timezone and True Solar Time

Submitted civil birth time: 2026-05-14 09:00

Resolved timezone: America/Los_Angeles (provided IANA timezone; provided longitude.
Calculation uses local apparent solar time.)

UTC offset at birth: -420 minutes; daylight-saving component: 60 minutes.

Longitude used: -118.2437

Equation of time correction: +3m 56s

Longitude/timezone correction: -52m 58s

Total true-solar correction: -49m 03s

Calculation birth time used for the Four Pillars: 2026-05-14 08:10

This matters because a different country, city, timezone, daylight-saving rule, or longitude can move the calculated hour branch, and near midnight it can even move the calculated day. The report therefore calculates from the corrected solar time, not from a browser-locale display value.

Calculated Four Pillars

Pillar	Heavenly Stem	Earthly Branch
Year	Byeong Yang Fire	O Horse, Fire
Month	Gye Yin Water	Sa Snake, Fire
Day	Mu Yang Earth	Ja Rat, Water
Hour	Byeong Yang Fire	Jin Dragon, Earth

The year pillar describes public roots and inherited environment. The month pillar describes the social climate around the person: work pressure, family expectations, and the season that sets the chart's weather. The day pillar is the self-reference point. The day stem is called the Day Master, meaning the symbol used as the center of interpretation. The hour pillar describes private rhythm, long-term direction, later-life themes, and future projects; if birth time is unknown, that part remains open.

Saju 101 for First-Time Readers

If this is your first Saju reading, start here. Saju does not begin by asking "What sign are you?" It starts by asking, "What was the exact seasonal and solar context of your birth?" That is why birth date, time, country, city, timezone, daylight saving, and longitude matter.

The word "pillar" means one column of information. There are four pillars because the system reads four time layers: year, month, day, and hour. Each pillar has two parts. The upper part is called the Heavenly Stem. You can think of it as the visible signal: what comes forward, what is easier to notice, or how an energy expresses itself. The lower part is called the Earthly Branch. You can think of it as the root or environment: what is stored underneath, what season it belongs to, and what kind of background pressure it creates.

The Day Master is not a horoscope sign. It is the reference point used to read the whole chart. Imagine reading a map: the Day Master is the "you are here" marker. Without that marker, the rest of the map has no practical meaning. The other elements are interpreted by asking how they support, drain, pressure, express, or organize the Day Master.

The Five Elements are not literal substances. Wood is not only trees, Fire is not only flame, Earth is not only soil, Metal is not only steel, and Water is not only water. They are behavioral categories. Wood grows and plans. Fire expresses and becomes visible. Earth stabilizes and repeats. Metal defines standards and boundaries. Water observes, studies, and strategizes.

The goal of this reading is not to make the client memorize terminology. The goal is to translate the structure into plain decisions: what kind of environment helps, what kind of pattern repeats, what should be strengthened, what should be reduced, and what timing should be respected.

How to Use the Terms Without Getting Lost

Whenever the report says "Heavenly Stem," read it as "the visible part of that pillar."
Whenever it says "Earthly Branch," read it as "the root or environment of that pillar."
Whenever it says "Day Master," read it as "the central reference point of the chart."

When the report says "Fire is visible," it does not mean the client should do more of it forever. It means that pattern is already easy to access. When the report says "Wood needs support," it does not mean the client is broken. It means that life becomes easier when that function is added deliberately.

This is also why the report repeats the corrected birth-time basis. In Western astrology, people often focus on signs and houses. In Saju, the hour branch and sometimes even the day can change if the solar correction crosses a boundary. For an overseas client, understanding this one point prevents many wrong readings.

Core Summary

The Day Master is Mu (Yang Earth). In this chart, Fire is the most visible element, while Wood needs deliberate support.

The first reading is not simply "strong element good, weak element bad." A strong element can be a talent, but it can also become a repeated habit. A weak element is not a defect; it is the part of life that needs environment, routine, and clear structure. For this client, the best use of the chart is to notice where the same pattern repeats in work, money decisions, relationships, and recovery style.

The submitted birthplace is Los Angeles, CA, United States. Because the calculation has been corrected for location, the interpretation is tied to the actual regional birth context rather than a Korea-only assumption.

Mu (Yang Earth) Day Master with strong Fire signal

Keywords

structure, timing, repeated behavior, missing-element support

Main Tool

use Fire deliberately instead of automatically

Watch Point

do not ignore the under-supported Wood function

Support Element

Wood

Focus Period

the next 30 days

How the Five Elements Work

- Wood: 0
- Fire: 4
- Earth: 2
- Metal: 0
- Water: 2

Wood means growth, planning, learning, flexibility, and long-term direction. Fire means visibility, expression, warmth, speed, and social presence. Earth means stability, responsibility, routines, storage, and practical decisions. Metal means standards, precision, boundaries, judgment, and refinement. Water means reflection, strategy, sensitivity, research, and hidden movement.

When English-speaking readers first hear these words, they may sound poetic. In practice they are a compact behavioral vocabulary. Wood asks "Where am I growing?" Fire asks "How do I express and become visible?" Earth asks "What can be repeated and stabilized?" Metal asks "What standard or boundary should I apply?" Water asks "What should I study before acting?"

For this chart, Fire is already easy to notice. The practical work is to support Wood without overcorrecting. The goal is balance through repeated small choices, not forcing a new personality.

Season and Chart Weather

The month pillar, here anchored by Sa (Snake, Fire), is the weather of the chart. In Saju, season matters because the same element behaves differently depending on climate. A bright Fire day in a dry season does not behave like a bright Fire day in deep winter. This is why month and place correction are not optional details.

For a beginner, think of the chart as a room. Some rooms are warm and fast, some are cold and slow, some are dry and boundary-focused, and some are humid and easily entangled with people. The report reads how the Day Master lives inside that room. If the room is too dry, connection must be built intentionally. If it is too humid, boundaries must be practiced. If it is too cold, momentum must be warmed slowly. If it is too hot, pacing and recovery become essential.

This report gives the practical weather reading first because chart climate affects every later interpretation. When you re-read the PDF, start here before judging career, money, relationship, or timing advice.

Day Master and Self Pattern

The Day Master is Mu (Yang Earth). This does not mean "you are only this one element." It means the rest of the chart is read in relation to this reference point. The month pillar shows the outside climate, the day branch shows the more private self, and the hour pillar shows direction over time.

The key question is not whether the Day Master sounds flattering. The better question is: what kind of environment lets this Day Master work cleanly? If support is missing, the person may overuse willpower. If output is excessive, the person may keep producing without enough recovery. If pressure is high, the person may organize life around duty before desire.

For practical use, read this section as a mirror for decision style. When a decision feels confusing, ask whether it supports the weak element, overfeeds the strongest element, or repeats the same old reaction.

Career and Money Pattern

This report does not promise wealth. In Saju, money interpretation is more useful when it describes behavior: how a person evaluates risk, whether they prefer stable systems or independent movement, whether they spend to reduce anxiety, and what kind of work setting makes follow-through easier.

With Fire most visible, the client may naturally repeat that element's style in work and money choices. That can become a strength when used deliberately. It can become a problem when every situation is solved the same way. The missing support is Wood, so career and money decisions should include one clear structure that brings that element into daily practice.

The best first action is to measure real response. Track what people actually pay for, answer, book, buy, or request again. Saju is useful when it turns personality into observable behavior.

Current Practical Timing

Timing in Saju has different scales. The birth chart is the base map. A ten-year cycle is the broad environment. A yearly flow is the weather of the current year. This report keeps timing practical: do not make a major life choice from a single emotional spike.

Use the current year as a testing period. Start small, measure response, and avoid turning a temporary mood into a permanent identity. If the chart is already heavy in one element, do not intensify that element just because it feels familiar. Use timing to pace action, recovery, visibility, and commitment.

For this chart, the useful question is not "Is this year lucky?" The better question is "What should be prepared, tested, consolidated, or reviewed while this yearly weather is active?" That keeps timing useful without turning it into passive prediction.

Practical Guidance

1. Build one weekly habit that supports Wood. Keep it small enough to repeat for four weeks.
2. When making work or money decisions, write the options first, wait for the first emotional reaction to settle, then choose from the list.
3. Do not confuse familiar behavior with correct behavior. The strongest element is familiar; balance usually comes from the less-developed element.
4. If birth time is near a two-hour boundary, order or request a time-variable review before treating the hour pillar as final.
5. Re-read the Calculation Basis section whenever correcting birth details, because timezone, DST, and longitude can change the chart.

Element-by-Element Application

Wood application: create a visible growth path. This can be a course outline, a reading list, a weekly planning block, or a skill tree. Wood becomes useful when the client can see where effort is going.

Fire application: choose a healthy form of visibility. This does not always mean social media. It can be a presentation, a portfolio, a clear offer page, a conversation with a decision maker, or a published result. Fire becomes useful when expression reaches another person.

Earth application: stabilize the basics. Meals, sleep, calendar, bookkeeping, repeated service delivery, and clean handoff processes are Earth behaviors. Earth becomes useful when life stops depending on mood.

Metal application: define standards. Decide what is acceptable, what is not, what the price is, what the deadline is, and what quality level must be met. Metal becomes useful when boundaries reduce confusion.

Water application: research before acting. Water is not passivity. It is observation, strategy, listening, and hidden preparation. Water becomes useful when the client stops rushing into a decision just to escape uncertainty.

For this chart, Wood should be practiced deliberately and Fire should be used as a tool rather than an automatic reaction.

Decision Pattern

The chart should be used before decisions, not only after problems happen. When a decision appears, write three columns: what I want, what the situation requires, and what can be tested within two weeks. This prevents the strongest element from taking over the whole decision.

If the client keeps choosing comfort, the weak element may be avoided. If the client keeps choosing pressure, the strong element may be overused. A good decision usually has both: enough familiarity to act, and enough missing-element support to grow.

For work decisions, ask what creates measurable response. For money decisions, ask what protects future options. For relationship decisions, ask what can be said clearly without punishment or performance. This turns the chart from an abstract system into a practical filter.

Boundary and Recovery

Every chart needs a recovery method. Recovery is not laziness; it is maintenance. If the chart expresses too much without storage, the person can look productive while becoming depleted. If the chart stores too much without expression, the person can become insightful but invisible.

Use a recovery rhythm that matches the missing support. Wood recovery is learning and gentle movement. Fire recovery is warmth, music, light, and safe expression. Earth recovery is routine and tactile order. Metal recovery is simplification and clean boundaries. Water recovery is quiet, sleep, journaling, and unobserved thinking.

The client should not wait until exhaustion to recover. Schedule recovery before the week begins. The strongest element often wants to keep going because it feels familiar. The weaker element needs protected time.

Thirty-Day Starter Plan

Days 1-7: confirm the birth data and save the corrected calculation basis. Choose one small habit that supports Wood. Do it at the same time each day.

Days 8-14: observe where Fire appears automatically. Write down three moments when you used the familiar pattern even though another response would have worked better.

Days 15-21: make one external test. Send an offer, ask for feedback, publish a small result, request a conversation, or measure a money behavior. The test must produce observable response.

Days 22-30: keep what worked and remove one obligation that only feeds stress. The goal is not a dramatic life change. The goal is to prove that the chart can become a weekly operating system.

Immediate Action Card

Before You Close This Report

First: choose one weekly habit that supports Wood.

Second: write down one place where Fire takes over automatically.

Third: run one small external test within 14 days, then keep only what creates a real response.

What This Report Delivers

This report is designed to stand on its own as a first structured Korean Saju reading. It gives the calculation basis, the Four Pillars, Five Elements, chart weather, Day Master pattern, career and money behavior, current timing, practical guidance, and a thirty-day starter plan.

Use it as a working document. Mark the section that felt most accurate, the section that felt most difficult to practice, and the one action that can be tested this month. The value of a Saju report increases when it is compared with lived evidence instead of read as entertainment.

If the client corrects birth country, city, timezone, longitude, or daylight-saving context after delivery, the report should be regenerated because the calculation itself may change.

How to Read This Again Later

On the first day, read only the calculation basis, Four Pillars, and Core Summary. The goal is to understand the structure without trying to solve everything at once.

After one week, re-read the Five Elements and Element-by-Element Application sections. Mark the element that already feels natural and the element that feels hardest to practice. That contrast is often where the most useful behavior change begins.

After one month, re-read the Thirty-Day Starter Plan and compare it with what actually happened. A Saju report becomes valuable when the client can say, "This pattern showed up in real life, and now I know what to do with it." Keep the report as a working document rather than a one-time prediction.

Palace Reading: Life Areas

The four pillars are also four life areas. The year pillar is public roots and early environment. The month pillar is the workplace, social role, and pressure from the outside world. The day pillar is the self and close partnership. The hour pillar is private rhythm, future direction, later-life themes, and long-term projects.

This matters because the same element means different things depending on position. Metal in the public root is not the same as Metal in the private future pillar. A standard that helps career may feel restrictive inside relationships. A talent that looks quiet in childhood can become visible later if it sits in the hour pillar.

For this chart, the month branch Sa (Snake, Fire) makes the social climate especially important. This section therefore reads not just "what elements exist," but where they act.

Deficiency and Repeated Desire

In plain English, deficiency means the area a person keeps trying to solve. It is not a moral flaw. It is the missing function that life repeatedly asks the person to build.

Here, Wood needs support. Watch for the behavioral version of that shortage: difficulty planning, hesitation to become visible, weak routines, loose boundaries, or insufficient reflection, depending on the element involved. The point is not to label the client. The point is to design a lifestyle that supplies what the chart does not supply automatically.

Five self-check questions: What do I keep postponing? What do I overdo when stressed? Which environment makes me calmer within ten minutes? Which kind of work feedback do I avoid? What small action would make next week easier? The answers show how the missing element appears in real life.

Activation and Resting Codes

Some parts of a chart act like active doors: they produce movement, speech, pressure, ambition, or response. Other parts act like resting rooms: they store memory, sensitivity, and background processing. This is not good or bad. A person needs both.

When active energy is overused, the person may keep responding to the world without digesting experience. When resting energy dominates, the person may understand deeply but move too late. This section reads how the chart alternates between action and storage so the client can choose better pacing.

The practical instruction is to separate decision time from recovery time. Do not ask the same part of yourself to perform, evaluate, recover, and plan all at once.

Quarterly Flow

This section divides the year into four practical seasons. It is not a monthly fortune-telling service. Twelve separate monthly predictions often create false precision. A quarterly view is more useful: it shows when to prepare, when to test, when to consolidate, and when to review.

Quarter 1: prepare the system. Use research, cleanup, and quiet decisions. Quarter 2: make the offer visible. Test messaging, pricing, and audience response. Quarter 3: consolidate what actually worked. Reduce scattered effort. Quarter 4: review the year and keep only the repeatable pattern.

Annual energy map: the year is organized into preparation, visibility, consolidation, and review.

For this chart, do not let the strongest element run every quarter in the same way. Assign each quarter a job. Preparation, exposure, consolidation, and review should feel different.

Q1	Q2	Q3	Q4
Prepare the system	Make the offer	Consolidate what	Review and reset
research, cleanup, and quiet decisions	visible test messaging, pricing, and audience response	worked reduce scattered effort	keep only the repeatable pattern

Career Fit

Career fit is not a single job title. It is the kind of operating environment where the chart can repeat useful behavior without burning out. Some people need clear standards. Some need visible performance. Some need research time. Some need a practical system that turns ideas into stable output.

For this client, roles should be evaluated by three questions. Does the role let Fire become useful rather than excessive? Does it build Wood through routine? Does it provide feedback that can be measured by real response?

Suitable directions may include structured advisory work, analytical service, education, operations, design of repeatable systems, or client-facing work where preparation and delivery are both valued. Caution areas are roles that reward constant reaction, unclear authority, or emotional overextension without measurable results.

Economic Activity Pattern

Money is treated here as behavior, not prophecy. The useful question is how the client earns, saves, spends, and takes risk. A chart can show whether money decisions become too emotional, too rigid, too impulsive, too invisible, or too dependent on other people's approval.

Use a two-account rule: one account for predictable obligations and one account for experiments. Experiments must have a fixed ceiling before they begin. If a purchase or investment requires emotional justification after the fact, it was probably not designed cleanly.

Practical guidance: measure experiments by response. Continue what creates actual payment, booking, reply, referral, or repeat demand. Stop what only creates private excitement.

Regional Time Review

The time correction used in this report is part of the interpretation, not a clerical note. The submitted clock time is local civil time. The calculation then checks timezone, daylight saving, longitude, and equation of time to produce true solar time.

If a birth is close to midnight, the corrected date can change. If a birth is close to a two-hour branch boundary, the hour pillar can change. If a country changed daylight-saving rules historically, the IANA timezone is the safest way to preserve the correct offset.

For this order, the calculation basis section shows the exact correction. If any input field was wrong, the chart should be regenerated rather than manually edited.

Work Style Operating Manual

This section turns the chart into an operating manual. In work, the first question is not "Which job title is lucky?" The better question is: which operating conditions let the client's structure repeat good output without draining the person?

Use three filters. First, does the role need fast visible response or quiet preparation? Second, does the role reward personal taste or strict standards? Third, does the role provide measurable feedback? A chart with strong expressive energy can struggle in invisible support roles. A chart with strong standards can struggle in chaotic environments where rules change every day. A chart with strong storage energy can understand deeply but delay exposure too long.

For this client, the work system should turn Fire into value while protecting time for Wood. That means the client should not build a career only around what feels natural. The missing element should become part of the schedule, job design, or collaboration structure.

Practical rule: before accepting a project, write down the output, deadline, feedback channel, decision owner, and payment or reward structure. If those five items are unclear, the chart will likely default to stress behavior.

Money Behavior Manual

This section reads money as behavior. The question is not "Will I be rich?" The question is "What money behavior repeats when I feel pressure?" Some people overspend to feel safe. Some hoard and miss timing. Some invest for excitement. Some avoid looking at numbers until the situation becomes urgent.

A useful money system has three parts. The stable account covers fixed obligations. The growth account funds skills, tools, or assets that increase future capacity. The experiment account is capped before the experiment starts. This prevents one emotional decision from taking over the whole financial structure.

If Fire dominates money behavior, the client may keep using the same familiar decision style. The correction is to add Wood: planning if Wood is weak, visibility if Fire is weak, routine if Earth is weak, standards if Metal is weak, research if Water is weak.

Recommendation: review money once a week at the same time. Do not review it only after anxiety appears. A fixed review time turns money from a fear object into an operating dashboard.

Timing Strategy

Timing strategy is different from prediction. Prediction asks, "What will happen?" Strategy asks, "What should I prepare for if this kind of energy becomes stronger?" Saju is more useful as strategy.

The corrected hour matters here because timing layers are sensitive. If true solar time moves the hour branch, the private rhythm and long-term project reading can change. If a correction crosses midnight, the Day Master itself can change. That is why this report treats location correction as a foundation.

For the current cycle, the client should use a prepare-test-consolidate-review rhythm. Prepare before visibility. Test before expansion. Consolidate before adding new work. Review before blaming personality. This protects the client from using intensity as a substitute for timing.

When the client feels pressure to act immediately, use a 24-hour delay unless the decision is truly urgent. Many chart problems become worse when a temporary yearly or quarterly pressure is treated as a permanent command.

Self-Diagnosis Checklist

Use these questions after reading the report:

1. Which part of the report felt uncomfortably accurate?
2. Which element do I use when I am under stress?

3. Which element do I avoid because it feels unnatural?
4. Which work environment makes me clearer within one hour?
5. Which work environment drains me even when the task is easy?
6. Do I make money decisions from numbers, emotion, pressure, or imitation?
7. What kind of feedback do I trust?
8. What kind of feedback do I avoid?
9. What relationship pattern repeats even with different people?
10. What one routine would make next month easier?

The point is not to answer perfectly. The point is to connect the chart to lived experience. A good reading should make the client more observant, not more passive.

Action Priorities

Priority 1: protect calculation accuracy. If the country, city, timezone, longitude, or daylight-saving context is wrong, regenerate the report.

Priority 2: turn Wood into a scheduled habit. Do not wait until it feels natural. Missing-element work often feels boring at first because it is not the automatic pattern.

Priority 3: measure work and money by response. Track replies, purchases, bookings, referrals, completed deliverables, and saved costs. These are better signals than mood.

Priority 4: separate planning from performance. Do not design the whole future while emotionally activated. Use a calendar, a written option list, and a review date.

Priority 5: re-read the report quarterly. This PDF is meant to be used as a working map, especially before job changes, pricing changes, large purchases, relocation, or relationship decisions.

Common Misreadings to Avoid

Do not read the strongest element as "the best element." Strong often means familiar, repeated, and easy to overuse. Do not read the weakest element as "bad luck." Weak often means the function must be supplied by routine, environment, collaborators, or deliberate practice.

Do not read the hour pillar casually for overseas births. The hour pillar is the most sensitive to timezone, daylight saving, longitude, and true solar correction. If the time is uncertain or near a branch boundary, the interpretation should say so instead of pretending to be exact.

Do not use Saju to avoid evidence. If a business offer does not sell, if a relationship pattern keeps hurting people, or if a financial habit keeps creating stress, the chart should help name the pattern and change behavior. It should not become an excuse to repeat the same pattern.

Do not compare this report to a short entertainment reading. A paid report should explain the basis, the logic, the behavior pattern, the timing implication, and the action step. That is why this PDF is written as a working document rather than a one-page prediction.

Re-reading Guide

First reading: read Before You Read This, Calculation Basis, and Calculated Four Pillars.

Second reading: read Five Elements and Deficiency to understand repeated behavior. Third

reading: read Career Fit and Economic Activity Pattern before making practical decisions.

When stressed, do not re-read the report as a verdict. Re-read only the Practical Guidance section and choose one action. When planning a larger change, re-read the Regional Time Review first to confirm the chart was calculated from the right birth context.

This report is for self-reflection and decision support. It is not medical, legal, investment, financial, therapeutic, or psychological advice.

"Luck favors preparation.
When the season changes,
prepared people can use the opening."

— Cheonglim Saem
